" ViewBinding Step By Step! "

```
curl_easy_setopt(comm, CURLOPT_URL, url);  
if (curl_easy_perform(comm) != CURLE_OK)  
{  
    fprintf(stderr, "Failed to set URL [%s]\n", errorbuf);  
    return 1;  
}  
  
curl_easy_setopt(comm, CURLOPT_FOLLOWLOCATION,  
                 1);  
if (curl_easy_perform(comm) != CURLE_OK)  
{  
    fprintf(stderr, "Failed to set redirect option [%s]\n", errorbuf);  
    return 1;  
}  
  
curl_easy_setopt(comm, CURLOPT_WRITEFUNCTION,  
                 curl_write_callback);  
if (curl_easy_perform(comm) != CURLE_OK)  
{  
    fprintf(stderr, "Failed to set writer [%s]\n", errorbuf);  
    return 1;  
}
```

buildFeatures {}

buildFeatures

▼ 🐘 Gradle Scripts

- 🐘 build.gradle (Project: Lektion_7_ViewModelToastSn)
- 🐘 build.gradle (Module :app)

```
buildFeatures {  
    viewBinding true  
}
```

Aktivera *viewBinding* för att få igång den i ditt projekt!

ViewBinding Initialization

Init

```
class MainActivity : AppCompatActivity() {  
  
    // Initialize ViewBinding  
    → private lateinit var binding: ActivityMainBinding  
  
    override fun onCreate(savedInstanceState: Bundle?) {  
        super.onCreate(savedInstanceState)  
  
        // Set ViewBinding  
        → binding = ActivityMainBinding.inflate(layoutInflater)  
        → setContentView(binding.root)  
    }  
}
```

Use Binding

Init

```
// ID's
val btnDisplayToast = binding.btnDisplayToast
val btnCounterValueAdd = binding.btnCounterValueAdd
val tvCounterValue = binding.tvCounterValue

tvCounterValue.setOnClickListener() {}
btnDisplayToast.setOnClickListener() {}
btnCounterValueAdd.setOnClickListener() {}
```

`binding>YourIdNameHere` ← Så här kommer du åt dina ID'n!

Här har vi definierat våra ID'n i variabler, så vi slipper skriva:

```
binding.btnDisplayToast.setOnClickListener() {}
```

Vi sparar på kod!

THANKS!
